

From zero to hero

Infrastructure as Code

Daniel Hasselwander

ti&m

Goals for this session

1. What is Infrastructure as Code
2. Why it is useful
3. Competitors product

Definition

Managing and Provisioning computer infrastructure through
machine-readable definition files

Deployment

automatic
deployment

automatic
infrastructure tests

Create time for
work on business

easy setup of
environments

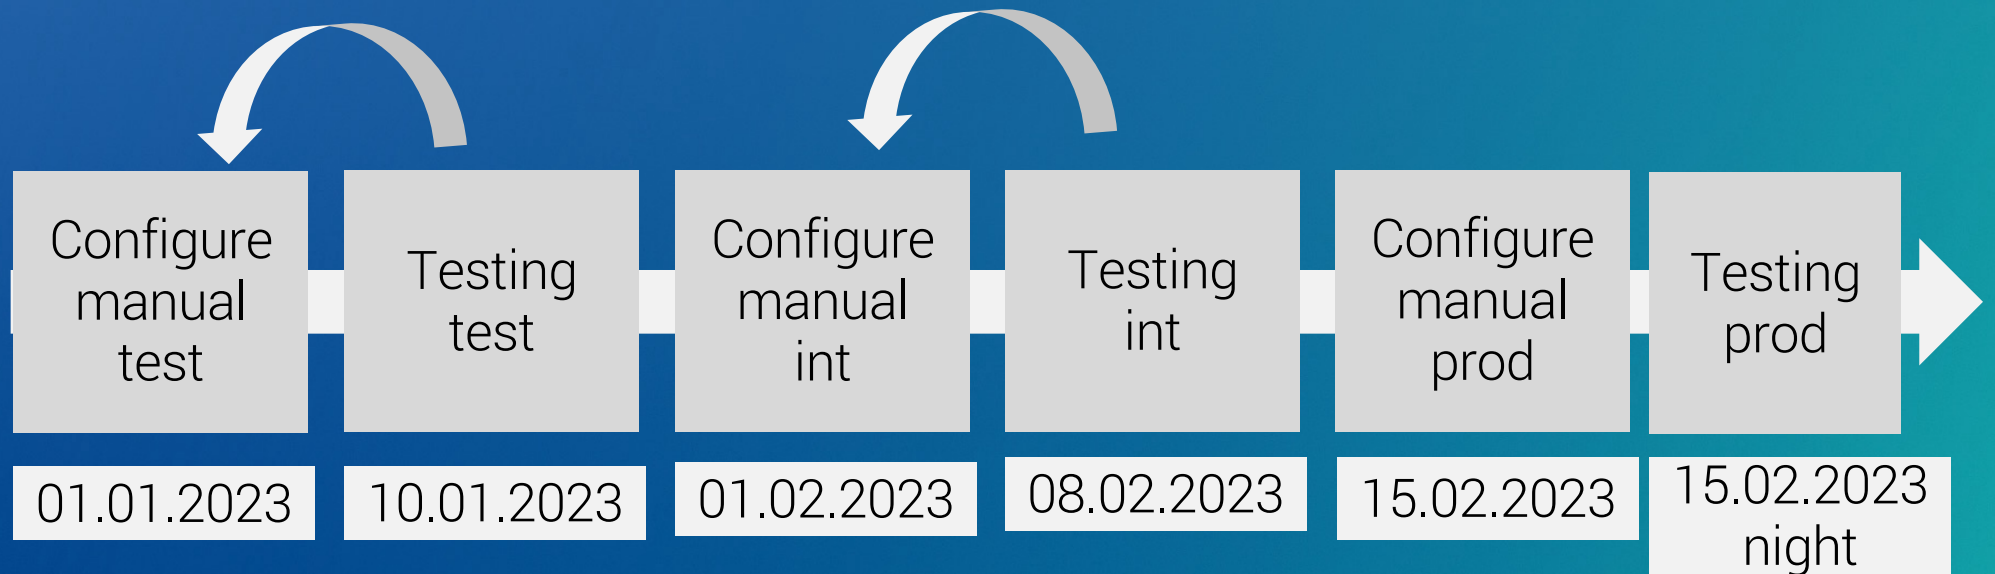

reviews for your
changes

Optimize your
costs

Deployment Manual

1. Login to the azure portal
2. Configure ressource to a test sub
3. Configure ressources in int sub
4. Configure ressources in prod sub

Deployment Manual

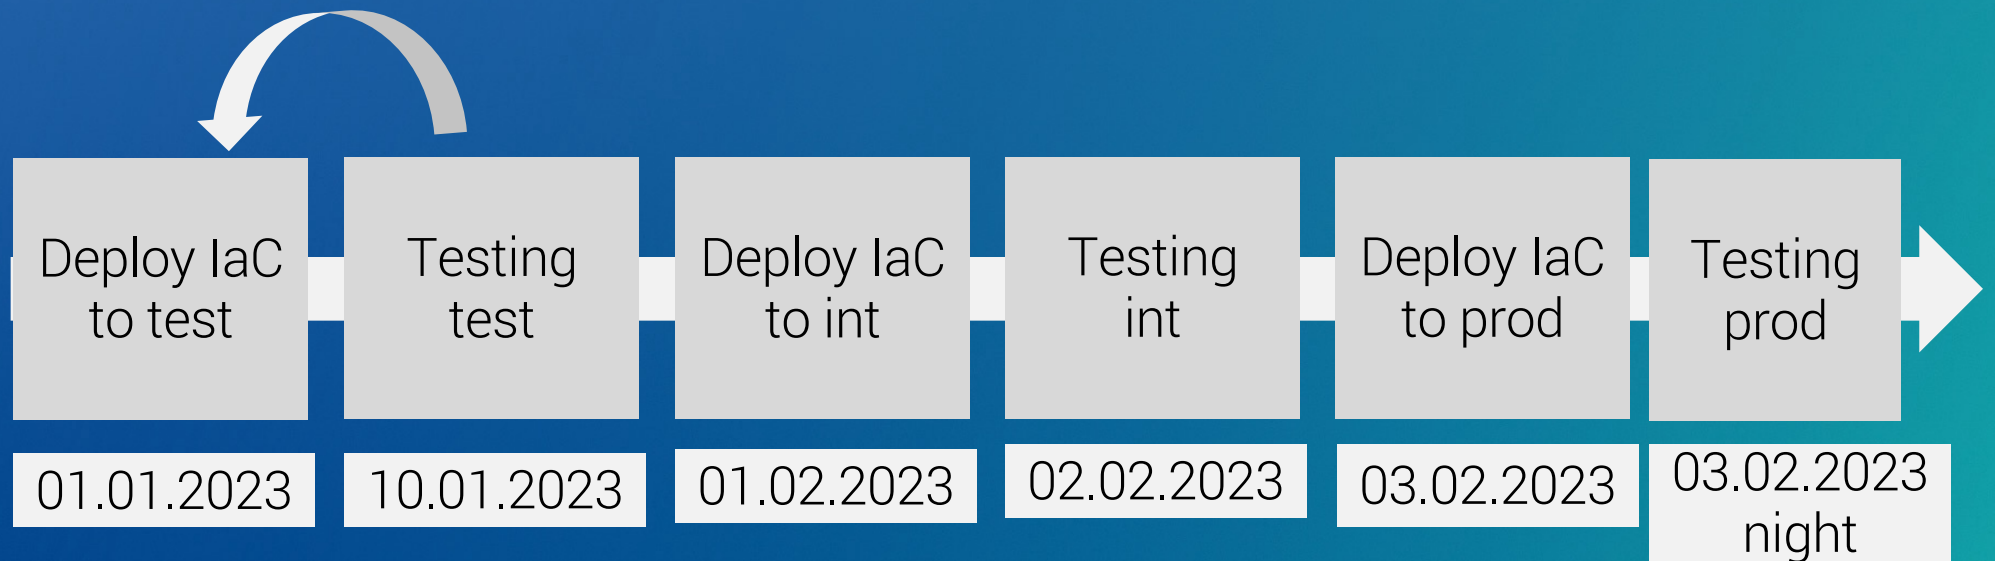

Deployment Manual – Typical Problems

Typos

Manual

Users can influence
production

Deployment IaC

Benefits

automatic
deployment

automatic
infrastructure tests

Create time for
work on business

easy setup of
environments

reviews for your
changes

Optimize your
costs

Benefits

automatic
deployment

automatic
infrastructure tests

Create time for
work on business

easy setup of
environments

reviews for your
changes

Optimize your
costs

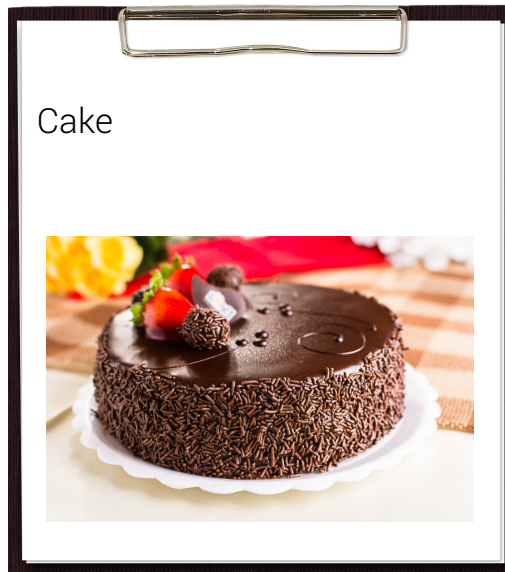

What IaC is not

A solution for all
your problems

Low Code and Click
Solution

Which methods can it used ?

- Declarative
- What is your target infrastructure

- Imperative
- How you can build your target infrastructure

How you can bake a cake ?

1. Put all the ingredients in a mixing bowl and mix it.
2. Mix the remaining batter with cocoa, amount to taste, and pour on top of the other batter. Draw patterns with a fork.

IaC Tools

Declarative

HashiCorp

Terraform

Azure Resource Manager

ANSIBLE

Imperative

Pulumi

IaC Tools Comparison Docent Task

Write a script which create a azure ressource group if not exist with the name rg_test.

Create a storage account with the name storageaccount inside of the ressource group if not exist and create a blob container inside of this storage

IaC Tools Comparison Docent Task Imperativ

```
resourceGroupExist=$(az group exists --name "rg_test");

if [ "$resourceGroupExist" == 'false' ]; then
    az group create --name "test_rg" --location "switzerlandnorth";
else
    echo "RG exists!"
fi

if az storage account show --name "storageaccountname" --resource-group "rg_test" --query "name"; then
    containerExist=$(az storage container exists --account-name "storageaccountname" --name "container" --query "exists" --auth-mode login);
else
    storageAccountNotExist='true'
    containerExist='false';
fi

if [ "$storageAccountNotExist" == 'true' ]; then
    az storage account create --name "storageaccountname" --resource-group "rg_test" --kind StorageV2 --location "switzerlandnorth" --sku Standard_LRS
else
    echo "ST exists!"
fi

if [ "$containerExist" == 'false' ]; then
    az storage container create --name "container" --account-name "storageaccountname"
else
    echo "Container exists!"
fi
```

IaC Tools Comparison Docent Task Declarative

```
terraform {  
  backend "local" {  
    path = "./terraform.tfstate"  
  }  
}  
  
terraform {  
  required_providers {  
    azurerm = {  
      source = "hashicorp/azurerm"  
      version = "3.82.0"  
    }  
  }  
}  
  
provider "azurerm" {  
}  
  
resource "azurerm_resource_group" "rg" {  
  location = "switzerlandnorth"  
  name     = "rg_test"  
}  
  
resource "azurerm_storage_account" "storageaccount" {  
  account_replication_type = "LRS"  
  account_tier             = "Standard"  
  location                 = "switzerlandnorth"  
  name                     = "storageaccountname"  
  resource_group_name      = azurerm_resource_group.rg.name  
}  
  
resource "azurerm_storage_container" "stcontainer" {  
  name                = "container"  
  storage_account_name = azurerm_storage_account.storageaccount.name  
  container_access_type = "public"  
}
```

Whats your opinion about this task

Comparison Declarative and Imperative

Manage
dependencies can
be very hard

Lot easier to read

We digitalize your company.
